

1- list of members and add their corresponding AS

- * Mauritel : AS29544
- * Mattel : AS37508
- * Chinguitel : AS37541

2- IPv4 and IPv6 peering LAN
It is a private subnet : 10.1.1.0/30

3- the IXP AS numbers
actually it has a private AS number which is : AS65000

4- Is the IXP-AS peering at the IXP platform ?

- YES

5- Do you think your IXP would be open to connecting with other IXPs in order to increase peering in your sub-region?

May in the future

Hello Thiam,

For research purposes, I am currently collecting colocation information for African IXPs from IXP websites, PeeringDB, Telegeography's Internet Exchange Map, and PCH.

We would like you to validate the information we have collected from these sources. I could not collect no information about the RIMIX.

As far as Mauritania's IXP (RIMIX) is concerned,:

1- Could you please check the list of members and add their corresponding AS numbers (if not present already)?

2- Could you please add/validate your IPv4 and IPv6 peering LAN as well as your peering Administration block ?

3- Could you please add the IXP AS numbers if there are any ?

4- Is the IXP-AS peering at the IXP platform ?

5- Do you think your IXP would be open to connecting with other IXPs in order to increase peering in your sub-region?

Thanks and regards,

Roderick
